

Seco Tools Inc.

Sector Focus: Consumer Products

A sector of the Seco Tools AB global organization, Seco Tools Inc. is a world leader in metalworking technologies, providing solutions for milling, turning, holmaking and threading applications. When Seco relocated last July from the decrepit building they had occupied since the 1930's, they chose Knoll dealer, American Interiors, to provide a fresh, yet timeless environment to their new 51,000 square foot space. Taking advantage of the versatile nature of Knoll product offerings, Seco used a combination of Reff® systems for both open plan and private offices.

A storage island with Calibre® files, cover, features additional shared space for collaboration. Chadwick™ conference chairs adjust to the weight of the body, providing personalized and effortless ergonomic support. Reff® workstations in durable maple veneers, left, provide ample work space and storage for support staff. Planned with high panels, they preserve privacy from the passersby. The private office, top right, is furnished with Life® seating, JR® side chairs and a freestanding Reff® system. Calibre® storage systems, bottom right, delineate space and provide additional filing capacity for Seco associates.
