

# Knoll Luxe Drapery Handling and Fabrication Suggestions

**Knoll**Textiles

## **Auden**

- Handle with extra care. Avoid folding to prevent creasing. Store suspended on a bolt in a single layer. Do not store folded or under other goods.
- Remove jewelry that may catch and pull yarns.
- Use a stay stitch before cutting or use adhesive along the weft yarns to keep cut edge together and prevent fraying.
- Loosen the pressure of the presser foot to prevent feed dogs from snagging fabric.
- Basting is preferred, as pins may catch and pull yarns.
- Iron at a low temperature or use a light steam to remove wrinkles.

## **Double Vision**

- Place a weight in bottom hems.
- Use a header tape to prevent slipping.
- Iron at a low temperature or use a light steam to remove wrinkles.

## **Emerson**

- Line up embroidery pattern when seaming.
- Baste first to prevent slipping.
- Use a cording or zipper foot when stitching to help guide the fabric and sew over the embroidered dots.
- Iron at a low to medium temperature, if necessary.

## **Parker**

- Use a very sharp, lightweight needle.
- Stay stitch fabric before cutting to prevent threads from fraying and shifting.
- Iron fabric on a low temperature, if necessary.
- This fabric can be finished with a fringed edge. To accomplish this, we suggest:
  - Fringe should be created with weft threads.
  - Stay stitch where the fabric will end and the fringe begins.
  - Carefully cut away the layers of organza leaving the weft yarns exposed.

Suggestions provided by Mary Bright Draperies in Brooklyn, New York.

All Knoll Luxe draperies should be handled with care by a skillful drapery workroom that is familiar with finer high end drapery. These fabrication guidelines are suggestions only—customers may choose another fabrication method not listed here. Knoll is not responsible for fabricated goods.
