From its streamlined form to its smart engineering, Chadwick is the office chair refined — and redefined. It responds to your body’s movements throughout the day with energizing comfort and a supportive ride.

**No Adjustment Necessary**

1. **Forward tilt**
   Chadwick has a built-in forward tilt that automatically follows and supports the user in the forward posture for typing.

2. **Intuitive Adjustments**
   - **Synchronized recline with tilt tension**
     To decrease the tension, turn the tension knob under the seat clockwise while seated in the chair. Turn it counterclockwise to increase the tension. The underside of the knob also indicates the instructions with arrows.

3. **Seat height**
   To raise the seat, remove your weight from the chair while lifting the lever on the right side of the chair. To lower the seat height, lift the lever while sitting in the chair.

4. **Upright tilt limiter (option)**
   To engage the upright tilt limiter, push the left lever in and to disengage, pull it out.

**Performance Options**

- **Spring loaded arms**
  Both fixed and adjustable armpads have a spring suspension, which provides the user with armpad softness and flexibility.

- **Adjustable arm height**
  Simply lift the armpads up to raise the arm height. To lower the arm, lift them to the highest point and then pull up firmly; they will return to the lowest point.

- **Adjustable arm width**
  The armpads have a width adjustment of 1/2” inward or 1/2” outward for 1” in total adjustability on each side. A 5/32” Allen wrench is required to adjust the armpad width.

- **Adjustable lumbar (option)**
  Adjust the lumbar by sliding the lumbar pad up and down the back of the chair.
