Knoll and Sustainable Design

Each year Knoll sets key initiatives in our journey to sustainability. We are members of a global consortium on energy, have adopted a scientific, metrics-based approach to sustainable product design, and maintain a leadership position in establishing universal, verifiable, sustainability standards for our industry.

Knoll promotes independent third-party certification because it provides the most impartial and trustworthy foundation for industry-wide environmental compliance. Certification by established and respected third parties ensures that all manufacturers are held to the same high standards and that customers can trust a company’s declaration about the environmental benefits of its products. Knoll third-party partners include: the International Standards Organization (ISO); Forest Stewardship Council (FSC®); Rainforest Alliance; GREENGUARD® Environmental Institute; and The Business and Institutional Furniture Manufacturer’s Association (BIFMA) level® certification from Scientific Certification Systems (SCS).

In addition, Knoll is aligned with the U.S. Green Building Council and can help companies, healthcare organizations and educational institutions achieve Leadership in Energy and Environmental Design (LEED®) workplace certification.

Global Climate Change

- Knoll is a sponsor of the Clinton Global Initiative, which brings together a community of global leaders to devise and implement solutions to some of the world’s most pressing challenges, including environmental change.
- Knoll has a comprehensive Energy Management Program to increase energy efficiency in products and processes.

Life Cycle Assessment (LCA) Tool

- Life Cycle Assessment is a science-based measurement of a product’s environmental impacts throughout its life cycle, from raw materials sourcing through manufacture, shipping, use and re-use or end-of-life. LCA enables cradle-to-cradle implementation of sustainable practices.
- Knoll has partnered with The Green Standard.org to develop an affordable, universal ISO-compliant computer-based LCA tool that can be used by the entire contract furniture industry and is partnering on the development of an Environmental Product Declaration System (EPDs) for Knoll products. EPDs are verified documents containing LCA results and additional environmental performance information about a product.

Setting Industry Standards

- Knoll partners with MTS (The Institute for Market Transformation to Sustainability) to develop the SMaRT® Consensus Sustainable Products Standards, a set of consensus-based sustainable product standards based on the LEED® model, for all building products, fabric, apparel, flooring and carpet. MTS, the developer of SMaRT®, is an accredited American National Standards Institute (ANSI) standard developer.
- Knoll also partners with BIFMA (Business and Institutional Furniture Manufacturers Association) to promote level® sustainability standards for the contract furniture industry.
- Knoll has established FSC® (Forest Stewardship Council) certified wood as the standard for general office open plan office systems, casegoods and tables.
- Knoll has launched Full Circle, a resource recovery program developed with ANEW, to help customers extend the life cycle of surplus furniture, fixtures and equipment (FF&E) in an economically, socially and environmentally responsible manner.
- Our goal is to encourage all manufacturers in the contract furniture industry and related industries to adopt standards that will lead to sustainable products and practices.

Locker Specifications
Digital Keypad Lock Details

Application
Anchor lockers with digital keypad lock option support applications where lockers are shared by multiple users.

The digital keypad lock option provides secure storage alternative to a standard key lock with a user-selected 4-digit code to lock and unlock the unit. This eliminates the use of a standard key which can easily be misplaced or taken off site. If a code is forgotten, a manager key (specified separately) can be used to bypass the code and unlock the unit.

Each installation site with digital keypad locks requires one programming key and at least one manager key, specified separately.

Specifications and Features
Digital Keypad Lock
- Brushed Nickel finish
- Black keypad with white numbers
- Vertical body orientation
- Recessed-mount, factory installed
- All metal lock housing
- Automatic (motorized) 1/2" dead bolt
- Powered by 4 premium AA batteries
- Operated with a user-selected 4-digit code
- Shared use application
- Tamper guard
- Audible and visible usage indicators
- Programmable automatic unlock
- Programmable LED usage indicator

To specify a locker with a digital keypad lock, select “D” in the pattern number for the lock option.

Example: WL5724FDRHL(D) - Locker with full height door, 57H x 24D, laminate, digital keypad lock

When specified, digital keypad lock is factory installed. Instructions for programming are included.

- Digital keypad automatically locks and unlocks a unit with a user-selected 4 digit code.
- Lock can be bypassed with a manager key if code is forgotten or in case of battery failure.
- LED usage indicator prompts the lock’s LED to flash when the unit is locked, indicating the locker is in use. The default setting for this feature is ON, however the LED usage indicator can be turned off with the program key at any time.
- Typical battery life is 3-5 years (based on length of usage). Turning the LED usage indicator feature off extends battery life.
- Four (4) AA batteries are included with the locks.
- Batteries can be changed without removing the lock mounting hardware.
- Locks can be programmed to auto unlock after a set amount of hours. The default setting for this feature is OFF (does not auto-unlock), but if desired this feature can be activated with the programming key at any time.

Manager Key
- Manager key is used to bypass a locked unit.
- Manager keys are registered to locks using the program key.
- One or more manager keys may be registered to each lock. This allows the client to design a lock system that suits their management access requirements.
- Additional manager key(s) may be registered to a lock without erasing previously registered manager keys.
- Provides external power in case of battery failure.
- Each lock accepts up to (25) manager keys.

Programming Key
- The programming key is a communication device used to initialize locks out of factory default mode and to register manager keys to the locks. It is used to transfer, but not store information.
- Only one programming key should be specified per installation site. Multiple programming keys cannot be used in conjunction with each other.
- If a programming key is lost, a new one may be ordered but the original programming key will become obsolete.
- Add-on or phased orders for digital keypad locks should be initialized and programmed using the original programming key.
- Used to turn on/off features such as LED usage indicator and auto unlock.
- Provides external power in case of battery failure.

Anchor Storage
Calculating the total number of manager keys
The digital keypad lock system is flexible, allowing the client to choose the number of manager keys required. Solutions may range from simple to complex, depending on client needs. It may be helpful to create a chart to organize and calculate the number of manager keys required, similar to the examples shown below.

Considerations:
- If units will be located on different floors, consider ordering keys that can be registered to bypass all locks as a floor-specific “master key”.
- If units will be located within different zones or areas, consider ordering keys that can be registered to locks within specific zones on each floor.
- If the client would like to create a “master key”, one or more manager keys can be registered to all locks to act as a “master key”.

Manager key count examples
Sample project is a three story space, each floor is divided into three zones containing a varied number of lockers. Example 1 is a simple lock system showing two manager keys registered to all locks, regardless of floor or zone. Example 2 is a more complex solution showing manager keys registered to locks in a layered approach. At the lowest management level, keys are registered specific to zone, followed by keys that are floor-specific and at the top level, keys are registered to all locks to be used as overall master keys.

The manager key counts shown in the examples are sample numbers; the ratio of manager keys to the number of locks is decided by the client.

Example 1:
Two (2) manager keys registered to all locks throughout the space. No manager keys registered specific to floor or zone.

Example 2:
- Manager keys registered to all locks within each specific zone on each floor. Number of manager keys is decided by client. Once registered, these manager keys may be used to bypass any lock within that zone on that floor, but will not be able to bypass any of the other units.
- One (1) manager key for each floor registered to all locks in all zones on that floor, used as first, second and third floor “master keys”.
- Two (2) manager keys registered to all locks, in all zones on all floors used as “overall master keys”.

KnollKey Lock Program

General Information

Following is the KnollKey lock policy, applicable to all products.

Knoll furniture can be ordered keyed-alike or random keyed. Key-alike and random keying instructions cannot be mixed on any single order. Only one of the two instructions can be used on an individual order. When an order is submitted with mixed (key-alike and random) instructions, Knoll will release the order as key-alike only and lock cores will have to be specified separately.

Key-alike

For the convenience of the user, furniture may be keyed alike at no charge. Write “Key-alike” in the description of your purchase order for any pedestal, overhead, file or other item you wish to have keyed alike.

Using the key-alike instructions, order cores and keys as line items on your purchase order. Do NOT submit a key-alike form. The Knoll East Greenville Lock Center will select key numbers from the standard range of K 001 - K 250. Key numbers will not be repeated unless over 250 sets are ordered. Lock cores keyed-alike will ship separately from the product, ready for field installation.

There is no charge for key-alike orders if placed with the furniture order. IF THE KEY-ALIKE ORDER IS NOT PLACED AT LEAST TWO WEEKS PRIOR TO THE FURNITURE SHIP DATE, A $50 HANDLING CHARGE AND AIR FREIGHT CHARGES WILL APPLY.

If product is ordered and shipped random-keyed, additional lock cores for key-alike are billable.

Random-Keying

To specify product keyed-random, write “key-random” in the product description. Random-keyed product is shipped with the lock core factory installed. A shrouded key is included. Random means no effort has been made to match key numbers, or to make them different.

Keys

A Knoll shrouded key is shipped with every lock core. 250 Key numbers are available. For numbers above 250, contact Custom Product Development. Additional keys and key blanks are available. See service parts for more information.

Master Keying

Knoll locks can be controlled by means of a master key. There is no additional per-lock charge for master keying. A letter of approval from the client must accompany orders for master keys.

Installing Lock Cores

Lock cores can be installed or removed in the field by using a change key. Cores must be in the unlocked position to be removed. See service parts for change key pattern number and pricing.

Lock Distribution

All orders for key-alike lock cores/keys are packaged and shipped from the East Greenville Lock Center, regardless of where the pedestals, overhead, or other units are produced. Random keyed product will have cores factory-installed.

How to Specify Key-Alike

Following is an example of how to specify key-alike for a cluster of 10 workstations.

Step 1 - Using the project floorplan, count the number of locks in each workstation.

Step 2 - Count the number of workstations with the same quantity of locks. Group together the workstations with a like number of locks.

Step 3 - For the first group (5 sets of 2 locks), enter the number of workstations in the quantity column.

Step 4 - Then enter the pattern number “KSPEC_ _” and add a suffix for the number of locks for that group (i.e., for 2 locks per station, add the suffix “2”). Up to 30 lock cores are available in a set (i.e., KSPEC 30).

Step 5 - Repeat for other groups.

Your Key instructions are complete.

Knoll will select key numbers for each set from 250 available numbers. Additional key numbers are available through Custom Product Development. For additions to existing installations, specify desired key numbers in the description.
