

k.™ lounge Collection  
Knoll Design

k.™ LOUNGE is a modular, plannable soft-seating series that delivers a broad range of capabilities, making it the go-to solution for Activity Spaces throughout the work environment. With 11 modular elements, k.™ lounge bridges the gap between object-based furniture and a plannable system. It is applicable in spaces ranging from small enclosed Refuge spaces to large open Community areas. Available in a variety of textiles and patterns, the collection easily makes a statement in any space, further defining an area for collaborative environments. Each k.™ lounge module offers a scale, seat height, recline angle and upholstery firmness that enable it to be used from all sides. Individual pieces can also be linked and configured to define a setting in the open plan.
