Remix Chair Lumbar Installation Instructions

Pattern number: 66LUMBAR

1. With the back of the chair facing you, counting from the bottom left, locate the intersection of the first vertical strap and the third horizontal strap.

   Orient one of the mounting plates with the teeth facing the installer and to the right. Slide the plate behind the fourth strap of the Flex Net Matrix so that the bottom tooth is between the third and fourth horizontal straps (from the bottom), and to the left of the vertical strap. The remaining teeth will go between the horizontal straps above it. Once in position, push the mounting plate to the right so that the vertical strap is inside the slot in the teeth.

2. Repeat with the other mounting plate on the right side and orient the plate with the teeth facing the installer and to the left.

3. Insert lumbar panel by centering the vertical opening in the lumbar panel on the middle vertical strap. Inserting the rear panel behind the horizontal strap that is fourth from the bottom, and push the lumbar panel upward, ensuring that the rear panel goes behind the vertical straps that the mounting plates are attached to.

   At the end of this step, both mounting plates and the lumbar panel should be aligned.

4. Attach lumbar panel to one mounting plate by interlocking. After secured, pull on the center of the lumbar panel to attach to the mounting plate on the opposite side.

Note: To remove lumbar, reverse the instructions above.
