CRITICAL STEP: At installation, or if a critical component such as a column or motor is changed or disconnected, a reset must be performed.

NOTE! Ensure that the area around and under the table is clear.

Press and hold the reset button for at least 10 seconds. Then press and hold the paddle “down” until each leg reaches its lowest limit. Release the paddle; the reset process is complete.

For use with Tone, Antenna Telescope and Reff Profiles

Install Toggle flush with edge of worksurface using only the two provided screws. If the worksurface thickness is less than 19mm (3/4”), use shorter screws (not provided). DO NOT USE LONGER OR HEAVIER SCREWS.

Connect
Connect the control switch to one of the column connector ports using the provided iDrive cable. The second port on the control switch can be used to connect approved devices.

Start-up / Reset
CRITICAL STEP: At installation, or if a critical component such as a column or motor is changed or disconnected, a reset must be performed.

NOTE! Ensure that the area around and under the table is clear.

Press and hold the reset button for at least 10 seconds. Then press and hold the paddle “down” until each leg reaches its lowest limit. Release the paddle; the reset process is complete.

Function Guide
Adjust the table upwards
Adjust the table downwards

Storing Memory Positions
Two memory positions are available; one for Standing Height, and another for Sitting Height. To store Standing Height: Adjust the table to your desired standing height.

To store Sitting Height, adjust the table to your desired Sitting Height. Follow the same procedure substituting a downward press of the paddle instead of upward.

NOTE: To replace either setting, simply follow this procedure and the new position will overwrite the old.

To move to your stored Standing Height, double-tap and hold the paddle upwards. The table will move to your stored position and stop. Release the paddle.

To move to your stored Sitting Height, double-tap and hold the paddle downwards. The table will move to your stored position and stop. Release the paddle.

NOTE: A single press and hold runs the table to the operational limit in whichever direction you are pressing the paddle - it does not stop at memory positions.

Installing the toggle:
The toggle should be installed in a location that allows for easy access and visibility. Typically, it is placed near the front of the worksurface, where it can be easily reached by the user. The toggle should be positioned flush with the edge of the worksurface for a clean and professional appearance.

Connecting the control switch:
The control switch is connected to one of the column connector ports using the provided iDrive cable. The second port on the control switch can be used to connect approved devices.

Adjusting the table:
To adjust the table upwards or downwards, press and hold the reset button for at least 10 seconds. Then press and hold the paddle “down” until each leg reaches its lowest limit. Release the paddle; the reset process is complete.

Storing memory positions:
Two memory positions are available: one for Standing Height, and another for Sitting Height. To store Standing Height: Adjust the table to your desired standing height. To store Sitting Height: Adjust the table to your desired sitting height.

To store the current position as a memory, simply follow the same procedure substituting a downward press of the paddle instead of upward.

NOTE: A single press and hold runs the table to the operational limit in whichever direction you are pressing the paddle - it does not stop at memory positions.

Accessing memory positions:
To access a stored memory position, double-tap and hold the paddle upwards for Standing Height or downwards for Sitting Height. The table will move to your stored position and stop. Release the paddle.

NOTE: To replace either setting, simply follow this procedure and the new position will overwrite the old.

Storing memory positions (cont.):
