Reconciling the flexible-but-wired paradox of the modern office, Currents manages ever-growing technology and power demands while simultaneously allowing for easy workspace reconfiguration. With data and power consolidated in a central spine, wall-mounted and freestanding furniture components can be easily and endlessly rearranged according to your team's changing workspace design needs. Whether planned independently, integrated with other Knoll products, or incorporated into existing installations, Currents presents new approaches to planning flexible workspaces and new solutions for advancing the performance of existing open plan systems.
