

Environmental Product Declaration

Moment™ Side Chair

Taking its cue from the cantilevered form of the classic tubular Brno chair by Ludwig Mies van der Rohe, Moment is a practical solution for the guest chair that most offices require. Moment complements our diverse portfolio of office seating and furniture with its pure expression of the cantilevered form.

Recycled Content

46.3% Post-consumer recycled content

Functional Unit

One unit of seating to seat one individual, maintained for a period of 10 years.

Moment has an expected service life of over 10 years, one product is needed to fulfill the functional unit. Analysis was conducted for a Moment chair with high-end specifications.

Shown above: Moment side chair. Manufactured in East Greenville, PA.

Environmental Product Declaration

Moment™

This declaration is an environmental product declaration (EPD) in accordance with ISO 14025. EPDs rely on Life Cycle Assessment (LCA) to provide information on a number of environmental impacts of products over their life cycle. Exclusions: EPDs do not indicate that any environmental or social performance benchmarks are met, and there may be impacts that they do not encompass.

LCAs do not typically address the site-specific environmental impacts of raw material extraction, nor are they meant to assess human health toxicity. EPDs can complement but cannot replace tools and certifications that are designed to address these impacts and/or set performance thresholds – e.g. Type 1 certifications, health assessments and declarations, environmental impact assessments, etc.

Accuracy of Results: EPDs regularly rely on estimations of impacts, and the level of accuracy in estimation of effect differs for any particular product line and reported impact.

Comparability: EPDs are not comparative assertions and are either not comparable or have limited comparability when they cover different life cycle stages, are based on different product category rules or are missing relevant environmental impacts. EPDs from different programs may not be comparable.

• **Materials Composition**

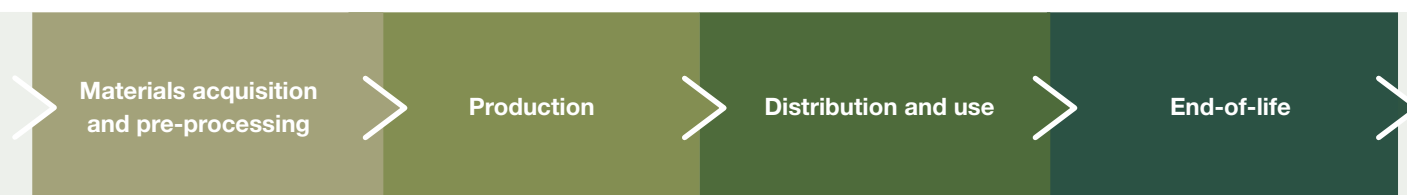

Material	% by mass	kg per chair	lbs. per chair
Aluminum	4.47	0.544	1.2
Fabric	0.168	0.0204	0.045
Nylon 6	7.69	0.937	2.07
PP (30% glass filled)	8.19	0.998	2.2
PU flexible foam	4.84	0.59	1.3
Steel	74.6	9.09	20

Total % may not equal 100% due to rounding errors

Environmental Product Declaration

Moment™

- **Life Cycle Stages**

A cradle-to-grave analysis was conducted for this EPD. Materials acquisition and pre-processing starts when the material is extracted from nature and ends when the material in component form reaches the gate of the production facility or service delivery operation. As such, it includes transportation between upstream suppliers and Knoll's production facility.

The production stage is a gate-to-gate stage that starts with the product components entering the production facility and ends with the final product, packaged for shipment, leaving the facility. This stage includes manufacturing processes that take place at Knoll, along with the production of packaging materials.

Product distribution and storage are included in the next stage, along with product use and maintenance. This stage can include multiple legs of distribution and storage. The use stage begins when the consumer takes possession of the product, and includes assembly, installation, repair, and maintenance as appropriate.

The end-of-life stage starts when the product is ready for disposal and ends when the product is landfilled, returned to nature, or transformed to be recycled or reused. This stage includes transportation of the used product to treatment or recycling facilities and emissions associated with disposal.

Life Cycle Assessment Results per functional unit (1 chair)

Inventory Metric	Units	Total
Net fresh water usage*	kg	334
Primary energy demand, total	MJ	943
Primary energy demand, renewable	MJ	167
Primary energy demand, non-renewable	MJ	777

*Specified, per the PCR: Water usage from electricity generation is included

• **Life Cycle Assessment Results**

Impact Assessment Categories

Impact assessment results are calculated using the TRACI 2.1 methodology (Bare, 2012).

Global Warming Potential

Acidification Potential

Eutrophication Potential

Ozone Depletion

see below

= -1.11E-008
kg CFC-11 eq.

Photochemical Ozone Creation Potential

● Materials Acquisition ● Production ● Distribution & Use ● End of Life

Life Cycle Assessment Results per functional unit (1 chair)

Impact Category	Units	Materials Acquisition	Production	Distribution & Use	End-of-Life	Total
Global warming potential	kg CO ₂ eq.	34.9	15	1.6	0.403	51.9
Acidification potential	kg SO ₂ eq.	0.107	0.0353	0.00774	0.00177	0.152
Eutrophication potential	kg N eq.	0.00581	0.00319	0.000644	0.000344	0.00998
Ozone depletion*	kg CFC-11 eq.	-1.74E-008	6.26E-009	5.42E-014	7.6E-014	-1.11E-008
Photochemical ozone creation potential	kg O ₃ eq.	1.34	0.428	0.174	0.0352	1.98

* Based on negative total impact for the Ozone Depletion, the Impact Assessment Category bar graph is not provided.

This EPD was not written to support comparative assertions. EPDs based on different PCRs or different calculation models may not be comparable. When attempting to compare EPDs or life cycle impacts of products from different companies, the user should be aware of the uncertainty in the final results due to and not limited to the practitioner's assumptions, the source of the data used in the study, and the software tool used to conduct the study.
