

# Nebraska County Technology Commission

## Sector Focus: Communications

When the Nebraska County Technology Commission, a technology partner of the City of Omaha and Douglas County that provides a robust and secure infrastructure, renovated its City Hall offices in downtown Omaha, the Company turned to HDR Architecture and Knoll dealer, Spaces, Inc. to select durable, reconfigurable products that would allow the Company to continue to support its clients' evolving technology needs.

For its private offices, the Company selected the Magnusson® Desk in Maple veneer, which offers a traditional, confident aesthetic (left). Ricchio JR Arm Chairs provide guest seating and Sapper™ Monitor Arms integrate seamlessly into a variety of environments.

Currents® Service Wall in combination with freestanding Upstart table desks and screens in the open plan office delivers a lighter, more flexible alternative to panel-based layouts to support teamwork, collaboration and open communication. Currents Mobile pedestals provide storage within individual workstations (cover). The Company's conference and training rooms feature Propeller® Peanut Base flip and nest training tables, offering inherent flexibility and wire management to support technology demands. Generation by Knoll® seating is used throughout the space (left). Generation's high performance elastomer Flex Back design provides comfort and unrestrained movement through the work day.
