Colorfastness to Wet and Dry Crocking

Colorfastness to wet and dry crocking refers to the rubbing off of color from fabric onto clothing, hands or other materials; which can occur under wet or dry conditions. Passes: AATCC 8.1974 Dry Crocking, Class 4 minimum; Wet Crocking, Class 3 minimum.

Colorfastness to Light

Colorfastness to light is the degree to which a fabric will retain its true color when exposed to light. Passes: AATCC 16A.1974 or AATCC 16E.1976; Class 4 minimum at 40 hours.

Physical Properties

Abrasion

Abrasion is the ability of a fabric to withstand damage from wear and rubbing. Passes: Heavy Duty: ASTM 3597 modified (No. 10 cotton duck); 30,000 double rubs Wyzenbeek Method or ASTM 4966 modified (with 21 oz. weight); 40,000 rubs Martindale Method.

Cal 133

These fabrics can be used in combination with other designated SitOnIt and IDEON components to meet the California Technical Bulletin 133 standard for furniture flammability.

Colorfastness to light is the degree to which a fabric will retain its true color when exposed to light. Passes: AATCC 16A.1974 or AATCC 16E.1976; Class 4 minimum at 40 hours.

Physical Properties

Three physical property tests include: the brush pill test to determine a fabric’s tendency to pill; breaking/tensile strength tests the ability of a fabric to withstand tension without breaking or tearing; seam slippage measures the pulling apart of fabric at the seams. Passes: Brush Pill: ASTM D3511, 3 – 4 minimum. Breaking Strength ASTM D3597.D1682.64 (1975) 50 lbs. minimum in warp and weft. Seam Slippage: ASTM D3597.D434.75 25 lbs. minimum in warp and weft.

Abrasion

Abrasion is the ability of a fabric to withstand damage from wear and rubbing. Passes: Heavy Duty: ASTM 3597 modified (No. 10 cotton duck); 30,000 double rubs Wyzenbeek Method or ASTM 4966 modified (with 21 oz. weight); 40,000 rubs Martindale Method.
